

EULA Launch Checklist

Action Checklist — ClearLegalTips.com (2026)

Run this list before your app or software ships with its EULA.

Step 1 — Draft

- License grant scope set: devices/seats, personal vs business use
- Restrictions tuned to the product (copying, reverse engineering, redistribution)
- Liability cap and warranty disclaimer completed with consumer-law qualifiers
- Open-source components inventoried; their licenses acknowledged, not claimed

Step 2 — Check Consistency

- EULA does not contradict the privacy policy
- EULA does not contradict the terms of service (if the product has a service side)
- Meets app-store minimum terms where you distribute
- Export-compliance line included if the app is distributed internationally

Step 3 — Wire Up Assent

- EULA shown in the install / first-run / signup flow
- Affirmative I Agree action required before use
- Acceptance log records user, timestamp, and EULA version

Step 4 — Maintain

- Version number bumped on every change; old versions archived
- Re-acceptance triggered for material changes
- Annual review calendared (law and product both move)

INSTRUCTIONS FOR USE

Enterprise licensing, embedded software, regulated data, or copyleft components call for a software attorney's review before launch. This checklist is general information, not legal advice.
